## SUMMARY

---

A highly skilled and passionate full-stack developer with extensive experience in building innovative and user-centric web applications. Proven expertise in modern JavaScript frameworks (React.js, Next.js, Svelte), backend technologies (RESTful APIs, GraphQL), and best practices for performance optimization, security, and code quality. Possesses strong communication and collaboration skills, with a proven track record of mentoring junior team members and driving successful project outcomes.

## SKILLS

---

HTML JavaScript TypeScript React Next.js GraphQL Cypress SQL Node.js Authentication OAuth2  
JWT API design

## WORK EXPERIENCE

---

### 1ex Trading Board

March 2024 - Present (6 months)

#### Frontend Engineer

- Developed engaging landing pages under tight deadlines, utilizing React and Next.js features for secure authentication, form server actions, and multi-step wizard flows.
- Redesigned and refactored complex web applications within compressed timeframes, ensuring a smooth and efficient user experience.
- Served as the sole frontend engineer on multiple projects, showcasing strong problem-solving and independent work skills.
- Implemented RESTful APIs and OAuth2 authentication, demonstrating a deep understanding of API design and secure authentication protocols.

### Alloy Software

January 2021 - October 2023 (2 years 10 months)

#### Fullstack Engineer

- Developed a full stack application using .NET, C#, React Query, React.js, Jest, and Zustand to manage device networks for thousands of businesses.
- Optimized caching mechanisms and implemented asynchronous data fetching to reduce task processing time by 30%, demonstrating a keen eye for performance optimization.
- Integrated microservices, microfrontends, and SSO, achieving seamless integration across different systems.
- Collaborated with designers to implement pixel-perfect UIs using Material-UI, ensuring a sleek UI/UX and adhering to design specifications.

### A-ADS

January 2020 - January 2021 (1 year 1 month)

#### Frontend Engineer

- Developed and maintained online advertising platform for millions of ads using SEO, TypeScript, React.js, Gatsby, Tailwind CSS, and SCSS.
- Built a blog website using Gatsby and Tailwind CSS, leveraging GraphQL for data querying, demonstrating strong knowledge of front-end frameworks and data fetching techniques.
- Created landing pages with React and a custom SCSS-based design system, showcasing proficiency in CSS and design systems.
- Collaborated closely with the marketing team and designer, demonstrating excellent communication and collaboration skills.

## Fullstack Engineer

- Developed critical banking applications with financial transactions worth \$1M+ daily using TypeScript, Next.js/React, Node.js, Redux.js, and Nest.js.
- Implemented robust security protocols to safeguard sensitive financial data, adhering to industry regulations (e.g, PCI-DSS), demonstrating strong security best practices.
- Optimized application performance to handle high transaction volume (e.g, millions of dollars daily) with minimal latency, demonstrating expertise in performance optimization techniques.
- Designed and implemented the application with scalability and maintainability in mind, ensuring smooth operation and future growth, demonstrating a proactive approach to code quality and maintainability.
